Projects

60 Seconds

Front End Developer

01/2022 - 05/2022

Worked alongside other developers to build a web app called 60 Seconds that allows users to record short, daily, audio recording segments. Daily, a user can record audio segments up to 60 Seconds in length. Once the audio is recorded, the Natural Language Processing can extract event name, location and time information from the text converted from audio, and save to the calendar as an event.

- Used: HTML/CSS JavaScript, React.js, Node.js, MySQL, AWS EC2, Git, Expo
 - Implement front-end in React.js (Login/Logout, Register, Home Page, Edit Profile Page, Calendar Page).
 - Used Axios to make HTTP calls to the chack-end APIs
 - Deployed to AWS EC2 server
 - Url: <https://60seconds.io/>
 - GitHub Repository: <https://github.com/Capstone-Projects-2022-Spring/project-60seconds>
-

Skills

HTML/CSS, JavaScript, Angular.js, React.js, Java, Express.js, Node.js, SQL, Git

Education

Temple University

Bachelor of Computer Science • Philadelphia , PA

05/2022
